JIMIT SHAH

Entry-Level Cloud Engineer | AWS • Linux • Terraform

Ahmedabad, India | +91-7984156399 | jobinterviews0218@gmail.com | linkedin.com/in/jimit-shah-bb9926302 | github.com/jimitshah07

PROFESSIONAL SUMMARY

Cloud-focused Computer Science graduate (Integrated M.Sc.) seeking an entry-level **Cloud Engineer** or **Cloud Support** role. Hands-on with AWS compute, networking, storage and security, Linux troubleshooting, and Terraform for infrastructure as code. Completed in-depth preparation across all AWS Solutions Architect – Associate exam domains, backed by practical labs in a personal AWS account and a documented L1/L2 incident-response runbook. Strong Python and software background, including an internship delivering an AI-driven search pipeline.

CLOUD & TECHNICAL SKILLS

AWS Services	EC2, VPC, S3, IAM, RDS, Route 53, CloudFront, Auto Scaling, Elastic Load Balancing, CloudWatch, CloudTrail, Lambda, API Gateway, DynamoDB, SQS, SNS, KMS, Secrets Manager, Systems Manager
Cloud Concepts	Well-Architected design, high availability and fault tolerance, least-privilege IAM, VPC design (public/private subnets, route tables, NAT, security groups, NACLs), encryption, monitoring and alerting, cost optimization
Infrastructure as Code	Terraform (providers, resources, variables, state)
Linux & Operations	Ubuntu administration, SSH, nginx, service and process management, disk management, log analysis, incident diagnosis, runbook documentation
Tools & Languages	AWS CLI, Git, GitHub, REST APIs, Python, SQL, JavaScript, Java, C/C++, Django

PROJECTS & HANDS-ON LABS

L1/L2 Troubleshooting Runbook on AWS EC2 | AWS EC2, Ubuntu, Security Groups, nginx, Linux — 2026

- Built an Ubuntu EC2 (t2.micro) lab to reproduce and resolve production-style incidents: a stopped service, an SSH lockout caused by a stale Security Group rule, a disk-full condition and a crashed nginx process.
- Documented every incident (symptoms, diagnosis, root cause, fix, verification) in a reusable runbook, version-controlled at github.com/jimitshah07/l1l2-troubleshooting-runbook.
- Timed break-to-fix drills and resolved each incident in under 3 minutes.

System Health Monitor | Python, psutil, Flask, Linux — 2026

- Built a Python monitor that logs CPU, memory, disk and network metrics every 5 minutes, with threshold-based email and Slack alerts and a Flask dashboard (github.com/jimitshah07/system-health-monitor).

Decentralized Web3 Wallet | React.js, Django, Web3.js, Solidity, Polygon, Ethereum — 2024

- Built a full-stack wallet for multi-chain transactions on Ethereum and Polygon, with Django REST APIs, balance tracking, transaction history and private key encryption.

EXPERIENCE

Intern | Bloom Graphetira — Jan – Jun 2026

- Built a restaurant and food search AI pipeline, owning the work from requirements through delivery under mentor guidance.
- Delivered **Market Research Pro**, a 5,293-line multi-threaded Python application pulling live data from Google Maps, Amazon.in, Google Play Store and Google Trends, with a local Qwen2.5 model, SQLite caching and PDF export.
- Diagnosed and fixed concurrency and API rate-limit failures using SQLite WAL mode and exponential backoff.

Open Source Contributor | GitHub, Remote — 2024 – Present

- Contributed features, bug fixes and documentation to blockchain and AI open-source projects with developers worldwide.

EDUCATION

Department of Computer Science (Rollwala Computer Center), Gujarat University, Ahmedabad — 2023 – 2026

Integrated M.Sc. in Computer Science

Coursework: Data Structures and Algorithms, Database Management, Web Development, Machine Learning, Cryptography, Blockchain, App Development, System Building, Advanced Networking
